

Dendi Software

The demand for integrated patient care, pressure to prove value within large health systems and need to scale efficiently present significant challenges for today's clinical labs.

To address these critical business needs, clinical labs should implement a fully functional laboratory information system (LIS) because the system that a lab uses has a substantial impact on its overall operational efficiency.

By adopting an integrated solution that offers access to comprehensive patient data, efficiently delivers test results, introduces scalability and retains value, Dendi helps clinical labs support a more seamless, value-based care experience.

Maintain Industry Compliance and Keep Your Data Secure

In the healthcare industry, security matters. Dendi gives you peace of mind so you can focus on running your business.

- ✓ Send data over SSL (TLS) connections
- ✓ Store data with AES-256 encryption
- ✓ Comply with CLIA, HIPAA and CAP

The Next Generation of LIS

Collaborate Across Networks

Act as a care partner within provider networks, and never pay for internal users, provider logins or locations.

Promote Positive Patient Outcomes

Remove bottlenecks and make it easy for providers to place orders, view results and make informed decisions.

Maximize Operational Efficiency

Automation frees up technicians' time, allowing labs to analyze a greater volume of tests without more staff.

Increase Testing Capacity

Acquire new instruments, and easily configure profiles for tests, users and patients without vendor involvement.

Expand Testing Variety

Our system is modality-agnostic and supports a wide range of tests that are needed in a clinical setting.

Leverage Our Full Support

From implementation to pursuing long term goals, Dendi will be there for you every step of the way.

The Dendi Approach

Other systems are often either highly specialized, difficult to use or incredibly expensive. When it comes to LIS solutions, Dendi is the exception.

Dendi provides functionality where you need it and doesn't unnecessarily embellish its offering and then charge you for features you rarely use. Here are some other ways in which Dendi is different.

1 Exceptional Value

Avoid hidden setup fees and enjoy minimal switching costs. Our team will guide you in setting up your test menu, reporting templates and provider logins at no additional cost.

2 Timely Implementation

Dendi is a cloud-based platform, so users don't need to install any software or hardware to get started. As a result, we're able to complete system implementation in weeks versus months.

3 Manageable Maintenance

The system is updated on a regular cadence with zero downtime so operational efficiency is never disrupted.

4 A System That Scales

Easily add new integrations as your lab acquires new instruments. Eliminate the need for lab personnel to manually enter data into the LIS, allowing technicians to complete more tests without more staff.

5 Prioritized Provider Relations

Dendi supports your lab's ability to act as a total care partner within provider networks by not charging you based on the number of internal users or provider logins.

6 User Empowerment

We empower users to make the changes they need to fit their workflows and configure new tests, user accounts, provider logins and patient profiles without the need for vendor involvement; however, as business needs change, the Dendi team is here to help.
